Important information about your Constant Credit Account
Once advances are made from your Constant Credit Account, an INTEREST
CHARGE will automatically be imposed on the account's outstanding "Average
daily balance. The INTEREST CHARGE is calculated by applying the "Daily
periodic rate" to the 'Average daily balance" of your account (including current
transactions) and multiplying this figure by the number of days in the billing cycle.
To get the "Average daily balance," we take the beginning account balance each
day, add any new advances or debits, and subtract any payments or credits and
the last unpaid INTEREST CHARGE. This gives us the daily balance. Then we
add all of the daily balances for the billing cycle and divide the total by the number
of days in the billing cycle. This gives us the 'Average daily balance.'
